SUBSCRIPTION INFORMATION

Discrete Applied Mathematics (ISSN 0166-218X). For 1994 Volumes 48–55 are scheduled for publication. A combined subscription to Discrete Applied Mathematics and Discrete Mathematics (Vols. 121–133) at reduced rate is available. Subscription prices are available upon request from the publisher. Subscriptions are accepted on a prepaid basis only and are entered on a calendar year basis. Issues are sent by surface mail except to the following countries where air delivery via SAL is ensured: Argentina, Australia, Brazil, Canada, Hong Kong, India, Israel, Japan, Malaysia, Mexico, New Zealand, Pakistan, PR China, Singapore, South Africa, South Korea, Taiwan, Thailand, USA. For all other countries airmail rates are available upon request.

Claims for missing issues must be made within six months of our publication (mailing) date.

Please address all your requests regarding orders and subscription queries to: Elsevier Science B.V., Journal Department, P.O. Box 211, 1000 AE Amsterdam, The Netherlands. Tel.: 31-20-5803642, fax: 31-20-5803598.

All rights reserved. No part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means, electronic, mechanical, photocopying, recording or otherwise, without the prior permission of the Publisher, Elsevier Science B.V., Copyright & Permissions Department, P.O. Box 521, 1000 AM Amsterdam, Netherlands.

Special regulations for authors—Upon acceptance of an article by the journal, the author(s) will be asked to transfer copyright of the article to the Publisher. This transfer will ensure the widest possible dissemination of information.

Special regulations for readers in the USA—This journal has been registered with the Copyright Clearance Center, Inc. Consent is given for copying of articles for personal or internal use, or for the personal use of specific clients. This consent is given on the condition that the copier pays through the Center the per-copy fee stated in the code on the first page of each article for copying beyond that permitted by Sections 107 or 108 of the US Copyright Law. The appropriate fee should be forwarded with a copy of the first page of the article to the Copyright Clearance Center, Inc., 27 Congress Street, Salem, MA 01970, USA. If no code appears in an article, the author has not given broad consent to copy and permission to copy must be obtained directly from the author. The fee indicated on the first page of an article in this issue will apply retroactively to all articles published in the journal, regardless of the year of publication. This consent does not extend to other kinds of copying such as for general distribution, resale, advertising and promotion purposes, or for creating new collective works. Special written permission must be obtained from the Publisher for such copying.

No responsibility is assumed by the Publisher for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products, instructions or ideas contained in the material herein.

Although all advertising material is expected to conform to ethical standards, inclusion in this publication does not constitute a guarantee or endorsement of the quality or value of such product or of the claims made of it by its manufacturer.

✦AIMS AND SCOPE

Theoretical Computer Science is mathematical and abstract in spirit, but it derives its motivation from practical and everyday computation. Its aim is to understand the nature of computation and, as a consequence of this understanding, provide more efficient methodologies.

All papers introducing or studying mathematical, logic and formal concepts and methods are welcome, provided that their motivation is clearly drawn from the field of computing.

Papers published in ***Theoretical Computer Science*** are grouped in two sections according to their nature. One section 'Algorithms, automata, complexity and games' is devoted to the study of algorithms and their complexity using analytical, combinatorial or probabilistic methods. It includes the whole field of abstract complexity (i.e. all the results about the hierarchies that can be defined using Turing machines), the whole field of automata and language theory (including automata on infinite words and infinitary languages), the whole field of geometrical (graphic) applications and the whole field of measurement of system performance using statistical methods.

The subsection Mathematical Games is devoted (but not restricted) to the mathematical and computational analysis of games. It also covers connections or applications of games to areas such as complexity, graph and matroid theory, networks, coding theory, logic and surreal numbers.

The other section, 'Logic, semantics and theory of programming', is devoted to formal methods to check properties of programs or implement formally described languages; it will contain all papers dealing with semantics of sequential and parallel programming languages. All formal methods treating these problems will be published in this section, including rewriting techniques, abstract data types, automatic theorem proving, calculi such as SCP or CCS, Petri nets, new logic calculi and developments in categorical methods.

Mathematical Elasticity

Volume 1: Three-Dimensional Elasticity

By P.G. Ciarlet

Studies in Mathematics and its Applications Volume 20

This volume is a thorough introduction to contemporary research in elasticity, and may be used as a working textbook at the graduate level for courses in pure or applied mathematics or in continuum mechanics. It provides a thorough description (with emphasis on the nonlinear aspects) of the two competing mathematical models of three-dimensional elasticity, together with a mathematical analysis of these models. The book is as self-contained as possible.

Contents: Part A: Description of Three-Dimensional Elasticity. Geometrical and other Preliminaries. The Equations of Equilibrium and the Principle of Virtual Work. Elastic Materials and their Constitutive Equations. Hyperelasticity. The Boundary Value Problems of Three-Dimensional Elasticity. **Part B: Mathematical Methods in Three-Dimensional Elasticity.** Existence Theory based on the Implicit Function Theorem. Existence Theory based on the Minimization of the Energy. Bibliography. Index.

"The book certainly earns its place in the annals of distinguished contributions to elasticity theory. One is led to anticipate eagerly the appearance of Volume 2."
Mathematical Reviews

"The book is written in the elegant, bright style of an experienced pedagogue. The well thought out notation is unified throughout the whole volume. Besides specific concepts of elasticity, all nontrivial auxiliary topics of functional analysis and other branches of mathematics are explained and illustrated by examples. The chapters are concluded by exercises. The book is also ideal from a formal point of view, using various typefaces for emphasis and framing important formulas and figures. The volume is equipped with a 20-page survey of the main notation, definitions and formulas, a 573-item bibliography, and a 17-page index. This nice book can be fully recommended as an introductory textbook to contemporary nonlinear elasticity as well as a working textbook at graduate level for courses in pure or applied mathematics or in continuum mechanics."
Acta Applicandae Mathematicae

"Mathematical Elasticity is strongly recommended to those with some background in elasticity who would like to understand the most mathematical aspects of nonlinear elasticity theory. The book will serve as an excellent reference."
Applied Mechanics Reviews

"...covers a great deal of material without ever seeming cramped or cluttered... on each topic he proceeds briskly to the heart of the matter... a stimulating way to learn a subject... I come away from the book with a much-enhanced appreciation of several topics I thought I already knew... a superb textbook..."

SCOPE OF THE JOURNAL

The aim of this journal is to bring together research papers in different areas of algorithmic and applicable discrete mathematics, as well as applications of combinatorial mathematics to computer science, OR and various areas of science and technology.

Contributions presented to the journal can be research papers, short notes, surveys, and possibly research problems. The "Communications" section will be devoted to the fastest possible publication of the brief outlines of recent research results, the detailed presentation of which might be submitted for possible publication in DAM or elsewhere. The journal will also publish a limited number of book announcements, as well as proceedings of conferences.

INSTRUCTIONS TO AUTHORS

All contributions should be written in English or French, should have an abstract in English (as well as one in French if the paper is written in French) and – with the exception of Communications – should be sent in triplicate to Nelly Segal, Editorial Manager, RUTCOR – Rutgers Center for Operations Research, Rutgers University, P.O. Box 5062, New Brunswick, NJ 08903–5062, USA. The authors are requested to put their mailing address on the manuscript.

Upon acceptance of an article, the author(s) will be asked to transfer copyright of the article to the Publisher. This transfer will ensure the widest possible dissemination of information.

No page charge is made.

Manuscripts submitted for the Communications section, having at most 5 typewritten pages, should be sent to a member of the editorial board in triplicate. Detailed proofs do not have to be included, but results must be accompanied at least by rough outlines of their proofs. Subsequent publication in this journal or elsewhere of the full text of a research report, the outline of which has been published in the Communications section of our journal, is not excluded. Every effort shall be made for the fastest possible publication of Communications. Consequently the presentation of these manuscripts should be very clear.

Please make sure that the paper is submitted in its final form. Corrections in the proofstage, other than of printer's errors, should be avoided; costs arising from such extra corrections will be charged to the authors.

The manuscript should be prepared for publication in accordance with instructions given in the "Instructions to Authors" (available from the Publisher) details of which are condensed below:

1. The manuscript must be typed on one side of the paper in double spacing with wide margins. A duplicate copy should be retained by the author.
2. All mathematical symbols which are not typewritten should be listed separately.
3. Footnotes, which should be kept to a minimum and should be brief, must be numbered consecutively and typed on a separate sheet in the same format as the main text.
4. Special care should be given to the preparation of the drawings for figures and diagrams. Except for a reduction in size, they will appear in the final printing in exactly the same form as they were submitted by the author; normally they will not be redrawn by the printer. In order to make a photographic reproduction possible, all drawings should be on separate sheets, with wide margins, drawn large size, in India ink, and carefully lettered. Exceptions are diagrams only containing formulae and a small number of single lines (or arrows); these can be typeset by the printer.
5. References should be listed alphabetically, in the same way as the following examples:
   For a book: W.K. Chen, Applied Graph Theory (North-Holland, Amsterdam, 1971).
   For a paper in a journal: J. Rhodes and B.R. Tilson, Lower bounds for complexity of finite semigroups, J. Pure Appl. Algebra 1 (1971) 79–95.
   For a paper in a contributed volume: M.O. Rabin, Weakly definable relations and special automata, in: Y. Bar-Hillel, ed., Mathematical Logic and Foundations of Set Theory (North-Holland, Amsterdam, 1970) 1–23.
   For an unpublished paper: D. Allen, Relations between the local and global structure of finite semigroups, Ph.D. Thesis, University of California, Berkeley, CA (1968).

AUTHORS' BENEFITS

1. 50 reprints per contribution free of charge.
2. 30% discount on all Elsevier Science B.V. books (order forms will be sent together with the proofs).

US mailing notice – Discrete Applied Mathematics (0166-218X) is published monthly except semi-monthly in January, April, July, September and October (total 17 issues) by Elsevier Science B.V. (Molenwerf 1, Postbus 211, 1000 AE Amsterdam). Annual subscription price in the USA US$ 1392.00 (US$ price valid in North, Central and South America only), including air speed delivery. Second class postage paid at Jamaica, NY 11431.

USA POSTMASTERS: Send address changes to Discrete Applied Mathematics, Publication Expediting, Inc., 200 Meacham Avenue, Elmont, NY 11003. Air freight and mailing in the USA by Publication Expediting.
